FOR IMMEDIATE RELEASE

January 11, 2008

Quik-Irr Version 5.0 Introduced

Know ALL your costs with Quik-Irr Estimating Software

Simple • Accurate • Profitable

LOGAN, UT – Irrisoft, Inc. introduces Quik-Irr Estimating Software Version 5.0.

Quik-Irr 5.0 is uniquely suited for Landscape and Irrigation. By integrating resource databases, Quik-Irr simplifies bidding and improves accuracy to be more profitable.

Quik-Irr accounts for costs related to: Materials, Labor, Equipment, Subcontracts, Overhead, and General Conditions. Quik-Irr also enables instant access to product information, the ability to send purchase orders electronically to a supplier, and customizable reports.

The Quik-Irr Wizard is the key to its simplicity. The Wizard includes thousands of products in over 100 Wizard screens. The Wizard prompts a user to enter the needed items for a job, accessing irrigation and landscape databases to help build a complete and accurate bid. Custom databases can also be created for lighting, landscape materials or *any* other product.

Quik-Irr allows the user to work with a supplier who can provide a database or spreadsheet of pricing and product information that is easily loaded into the program. Quik-Irr takes the guesswork out of estimating, providing consistently accurate bids.
